

Canine parvovirus (CPV-2) causes severe illness and high mortality in shelter dogs, requiring lengthy and costly treatment.

94 shelter dogs with CPV-2 were treated.

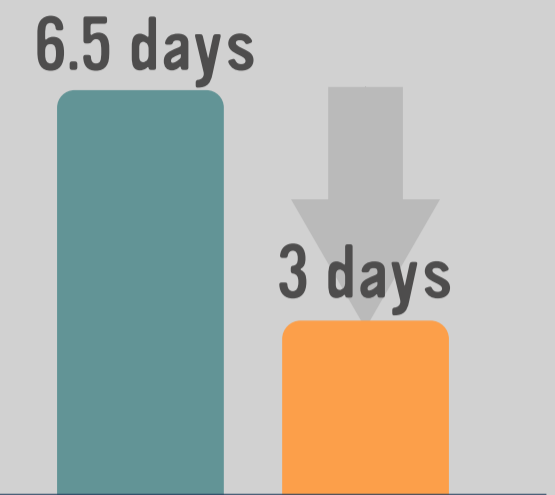

Control
(n=43)

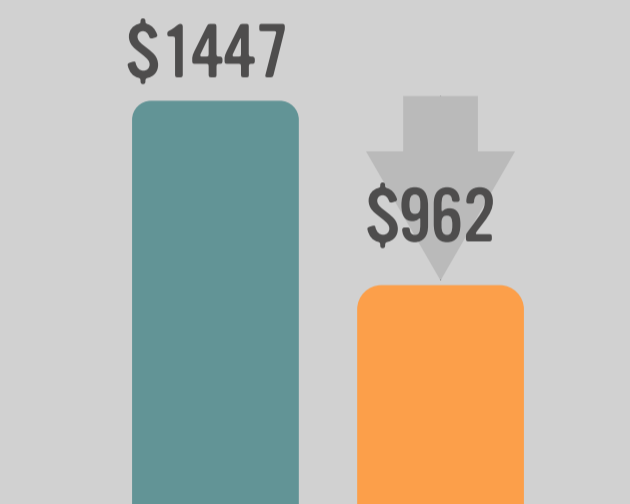

CPMA-treated
(n=51)

CPMA treatment significantly reduced treatment time and cost.

Length of
treatment

Cost

Mortality ↓ (12% → 6%), but not statistically significant

Adding CPMA shortened treatment time and reduced cost for CPV-2 cases in a shelter setting.
